1 Snapshot Objectives

Objective: Our main objective is to develop a product that will support the performance of our user's short-term memory capabilities.

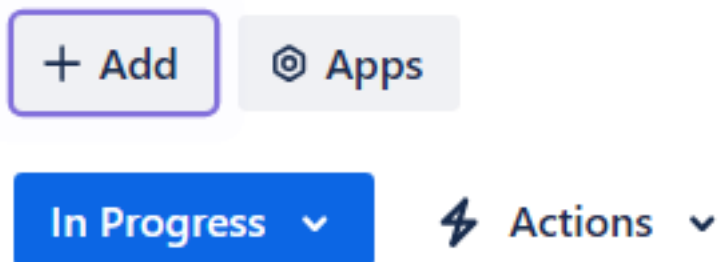

1.1 Snapshot 1

Delegation: Initial feature to be completed: **Home Page**

Dependencies:

- JavaScript
- ReactJS
- GitHub
- JIRA and Agile Development Technology
- Firebase

Memory Home Page - Feature (1)

Description

The home page shall allow the user to view, search, filter, and edit memories. Additionally, the user shall be able to navigate the interface intuitively.

2 Design Breakdown

2.1 Home Page

Purpose:The home page will provide navigation to other pages and a brief overview of created memories.

Features:

- List of all memories created by the user, displayed with details like title and date.
- Intuitive interface to ensure ease of use for users.
- Links to navigate to Memory Creation, More Detail, and Memory Contact pages.

2.2 Memory Creation Page

Purpose:Allows users to create and save new memories with detailed information.

Features:

- Form for memory input, including fields like title, description, tags, and categories.
- Firebase integration to store data in a secure backend.

2.3 More Detail Page

Purpose: The More Detail Page will show the user all the details of the memory as well as the option to edit the information

Features:

- Displays all details of a selected memory.
- Edit button to allow modifications to the memory's title, description, or other fields.
- Navigation back to the Home Page or other pages after editing.

2.4 Memory Contact Page

Purpose: The Memory Contact Page will show the user all contacts they have saved

Features:

- Displays all saved contacts relevant to the user's memories.y.
- Option to add, edit, or delete contact details.
- Links to a detailed contact view for individual contact information.

3 Development Tools

- **JavaScript and ReactJS:** Used for front-end development.
- **GitHub:** Version control and collaboration.
- **JIRA:** Task tracking and Agile development.
- **Firebase:** Backend as a service for authentication and database management.

4 Future Work

- **Improve Caregiver Features:** Some of the features that will help caregivers include GPS tracking of supported users and automatic role assignments. Another feature includes allowing the caregiver to remotely control the user's app to showcase to the care receiver how to perform a specific task.
- **Medication Tracking:** Users will be able to set up reminders for medication and medication administration and save things like proofs of prescriptions.
- **Machine Learning/AI Features:** This can include using AI to improve interactivity with the app or implementing smart reminders that can further support people with cognitive impairments.
